National Grid's commitment to our customers and communities begins by providing safe, reliable service, and meeting the increasing demand for energy. To meet these growing needs, we will reinforce our infrastructure so we can continue to provide a reliable supply of natural gas to customers in the region.

We are in the final design stages of an infrastructure improvement project between Menemsha Road and Spring Avenue in the Town of Brunswick to build an energy transfer station (ETS) capable of supplementing the natural gas system in the region to keep customers warm on the coldest days of the year.

The project is critically important to enable National Grid to continue the safe and reliable supply of natural gas to thousands of customers in the region.

We hope that you will join us at our Open House to learn more about the project.

We are committed to providing you with opportunities to stay up to date on this project. For more information please contact us at:
