National Grid's commitment to our customers and communities begins by providing safe, reliable service, and meeting the increasing demand for energy. To meet these growing needs, we will reinforce our infrastructure to continue providing a reliable supply of natural gas to customers in the region.

We are in the permitting and final design stages of an infrastructure improvement project between Menemsha Road and Spring Avenue in the Town of Brunswick. The project involves building an energy transfer station (ETS) capable of supplementing the region's natural gas system to keep customers warm on the coldest days of the year.

The project is critical to enabling National Grid to continue the safe and reliable supply of natural gas to thousands of customers in the region. We hope that you will join us at an information session to learn more about the project.

We are committed to providing you with opportunities to stay up to date on this project. More information can be found via our contact information below:
